### IN THE VINEYARD:

The diversity of the soils, slopes and elevation is closely linked with the quality of Plaisir's wines. Well-drained, weathered granite soils (predominantly Tukulu and Hutton), with good water retention, allow the Chenin Blanc blocks to capture the true character of climate and soils in its fruit. The vineyards, aged 10 to 14 years are situated between 350m and 450m above sea level on the south-eastern slopes of the Simonsberg.

### IN THE CELLAR:

The grapes were harvested by hand at 21° to 22° Balling. The grapes were divided into three different parts and each crushed, clarified and fermented separately. Fourth and fifth fill French oak barrels were used and the wine remained on the lees for 9 months. The barrels were rolled or stirred regularly to suspend the lees in order to gain complexity, better integrated oak flavours and to add to the mouth-feel of the wine.
